CadenceHUD

WORKFLOW INTELLIGENCE · CHAIN OF CUSTODY · REWORK ANALYSIS

ACTIVE INSTANCES	REWORK LOOPS	STEPS COMPLETE	EPISTEMIC RISK
47	12	184	3
across 3 projects	4 critical priority	this month	high-variance tasks

CadenceHUD is the workflow intelligence engine beneath every task in your project plan. While ProjectHUD shows *what* needs to happen and *when*, CadenceHUD shows how it is actually happening — and why it is delayed.

Every step. Every decision. Every rejection. Every human note. Permanently recorded, instantly visible, intelligently surfaced — for the people who need to know.

> **"The queue should make the cost of inaction visible without anyone having to say a word."**
>
> — CadenceHUD Product Philosophy · 2026

THE CORE INNOVATION

The Depth Below the Flat Plan

Every PM tool ever built makes the same mistake: a task row is a dead end. CadenceHUD makes it a portal.

PORTFOLIO
Collection of active projects · Firm-wide oversight

PROJECT → PHASE
The flat plan surface · MS Project / Excel territory

TASK ↓ PORTAL
Individual deliverable · Due date · Assignee · Dependencies

WORKFLOW INSTANCE CADENCEHUD
Steps · CoC · Rejections · PERT · Intelligence Briefing

WHAT NO TOOL HAS DONE

In every PM tool ever built, you cannot click on a task and descend into the micro-workflow beneath. The task row is a dead end. CadenceHUD changes this.

The project plan shows WHAT needs to happen and WHEN. CadenceHUD shows HOW it is actually happening and WHY it is delayed.

SCHEDULE CRITICALITY

Zero Float

CPM measures this. Well understood. Well tooled.

DEPENDENCY CRITICALITY

Hidden Weight

Not on the critical path — but 15 tasks wait on it.

EPISTEMIC CRITICALITY — CadenceHUD Exclusive

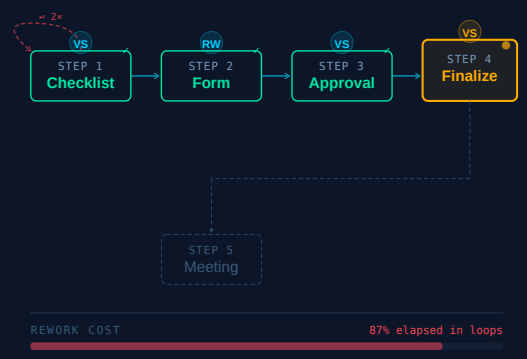
The R&D Nugget · First-ever automatic detection

High downstream weight × Wide PERT variance × Low reversibility. Completely invisible in every existing tool. *PMI has never done this in 70 years.*

THE ENGINE

Workflow Templates & Live Instances

INSTANCE DAG — Design Review Signoff · IN PROGRESS



REPLAY SCRUBBER

V. Staples · Approval: Design Review · rejected · Mar 22, 9:54 PM

"Are you FKN kidding me that the engineer had the gall to mock this project like he did??? Wait until I find that little mother fkr …"

◎ CHAIN OF CUSTODY ENGINE

Every step completion, rejection, reset, and activation is an immutable timestamped record. The complete history of every workflow decision — permanently preserved. Compliance-grade from day one.

⚡ LAYER 2 ROUTING ENGINE

Outcome-aware routing with full branching logic. Approved? Advance. Rejected? Reset to the right step. Complex multi-path workflows with explicit route overrides and suspend conditions.

◈ STAKES LAYER

Priority (Routine / Important / Critical), stakes text, and PERT three-point estimates captured at launch. Travel with every task derived from the workflow. The junior technician never needs to ask why something matters.

⊕ THERMAL URGENCY

Fresh is cool. Approaching due is amber. Overdue is red. Critical items pulse. Nature solved this problem — CadenceHUD works the same way. The signal escalates with time, automatically.

INTELLIGENCE LAYER

Briefings · AI Narrative · Morning Brief

◎ Intelligence Briefing

Design Review Signoff · Mar 22, 2026 · Generated 4:30 AM

IN PROGRESS

CURRENT STATUS

15h 18m	3 of 5	2×
Elapsed Time	Steps Complete	Rejections

● Currently active: Finalize: Design Review · Vaughn W. Staples · since 9:56 PM

✦ AI NARRATIVE CLAUDE GENERATED

> *"This Design Review Signoff has experienced 2 rejection loops consuming 87% of elapsed time in rework. The rejection pattern — correction of drawing notes followed by immediate re-approval — is consistent with a process quality failure, not assignee negligence. The workflow is one step from completion but has been in active state for 15+ hours…"*

NOTES & COMMENTS · 7 RECORDED

↩ Rejected Approval: Design Review 9:50 PM

> *"Project notes on primary drawings are incorrect as noted in the marked up copy."*

✓ Completed Checklist: Design Review 9:51 PM

> *"Did my best to correct the drawing notes … let's see what 'god' thinks when he goes to approve this again."*

MORNING INTELLIGENCE BRIEF · THREE TIERS

TIER 1

PM BRIEF

Tactical Operational

- → Yesterday's wins — with downstream impact language
- → Confidence signals received from resources
- → Items needing your decision today (max 4)
- → Today's critical path movers
- → Tomorrow's SLA exposure

TIER 2

MANAGER BRIEF

Strategic Operational

- → Portfolio health changes since yesterday
- → PM management posture — proactive vs. reactive
- → Resource pressure points across projects
- → Financial trend (weekly CPI/SPI direction)

TIER 3

EXECUTIVE BRIEF

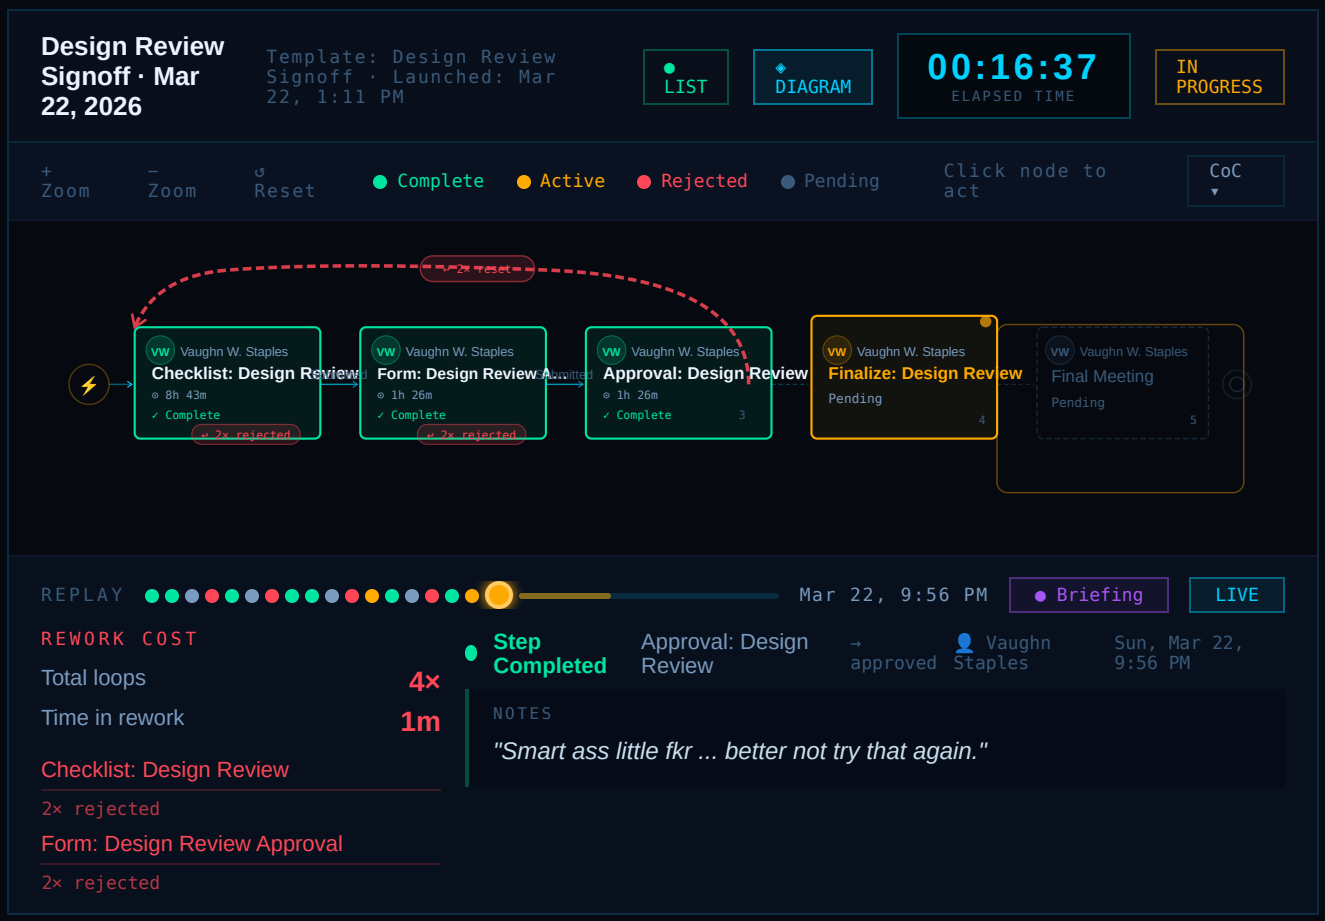
Strategic Financial

- → 3-sentence portfolio executive summary
- → Commercial performance vs. target
- → Systemic patterns — visible only at portfolio altitude

REWORK INTELLIGENCE · BITEMPORAL REPLAY ENGINE

The First Tool That Answers "What Did It Cost to Get Here?"

A full bitemporal state machine. Reconstruct any workflow at any moment in history. Watch the rework happen. Read the note that caused it.



Drag the scrubber left. The workflow rewinds. Nodes gray out. Arcs appear and disappear. The human note surfaces at the exact moment it was written. This is a bitemporal state machine — every historical moment

THE COMPETITIVE GAP

Jira, Monday, Asana, Smartsheet — they show you an activity log. A flat list of rows. You read it and reconstruct the story mentally. CadenceHUD *shows you the story.*

is perfectly reconstructable from the immutable CoC log.

87%

TIME IN REWORK

Of total elapsed time in rejection loops — not forward progress.

4×

REJECTION ARCS

Weighted by frequency. Thicker arc = more loops. Cost is physically apparent.

No competitor has rejection arcs. No competitor has a replay scrubber. No competitor surfaces the human note at the moment it was written.

COMING: CROSS-INSTANCE PATTERN LAYER

After 50 instances, the system knows which steps have the highest rejection rates across all runs. Each arc gets a benchmark overlay: *"This step has a 67% rejection rate across all instances of this template."* Individual rework stops being a performance judgment and becomes a process quality signal.

EXTERNAL RESPONSE ENDPOINT

One Click. No Login. Full Chain of Custody.

Client Sign-Off: Leak Seal Mitigation

Step 4 of 5 · Design Review Signoff workflow

Review the attached drawing and confirm all engineering notes reference Rev D of the flange specification. Note any discrepancies before approving.

● Approved

○ Request Changes

○ Rejected

Add a note (optional for approval)

Drawing notes confirmed against Rev D...

SUBMIT RESPONSE

Single-Use Token
Consumed on first response. Replay returns prior submission.

HMAC Signed
Cryptographically bound to firm, instance, and step.

Full CoC Written
IP, user agent, timestamp chain — compliance-grade record.

Routing Engine
Same routing logic as internal completion. Workflow advances.

CADENCEHUD · PROJECTHUD · 2026

Not a Checklist. A Living Record.

WORKFLOW INTELLIGENCE FOR ENGINEERING CONSULTING

01 ·

Every workflow is a living object — with routing logic,

02 ·

The project plan task is the surface. CadenceHUD is

03 ·

The human notes left at every rejection are the most

approvals, rejection loops, PERT estimates, epistemic scoring, and a full audit trail.

what lives beneath it — the depth no PM tool has ever connected.

valuable artifact in the system. CadenceHUD makes them visible in context.
